SUMMARY

Product Designer with 4+ years of experience in SaaS, fintech, AI and mobile products for B2B and B2C. Joins teams when a product is complex and still taking shape, and turns it into something people understand and trust: from research and user flows to design systems and developer hand-off. Led a team of 5 designers, designed 3 automotive data products and a Chrome extension rated 5.0. Mentor and founder of a community for women in design.

SKILLS

Product & UX: Product discovery, UX research, user interviews, user flows, personas, information architecture, usability testing, hypothesis validation, iteration

UI & Visual Design: UI design, responsive web, design systems, UI kits, typography, interaction design, accessibility basics

Product Delivery: Wireframing, prototyping, design hand-off, collaboration with developers, documentation

AI & Leadership: Conversational UI, AI assistant flows, design reviews, mentoring, team coordination

Tools: Figma, FigJam, Miro, Adobe Photoshop, Adobe Illustrator, Notion

Domains: SaaS, Fintech, AI, Automotive, Mobile, E-commerce, Culture

EXPERIENCE

Extra Safe is the main full-time role. TIMEPLACEME and Fruit Fight were separate project contracts that ran in parallel with it; freelance work was part-time alongside earlier roles.

Product Designer | Extra Safe | Full-time November 2024 – Present

Privacy-focused messenger with a built-in stablecoin wallet

I joined at the idea stage and built the brand from scratch: the visual identity, the visual style and a component library shared by marketing and development, which let the team add the wallet, new networks and new markets without redesigning from scratch. I designed extrasafe.chat, three ecosystem websites and the App Store and Google Play screenshots, and restructured the site around one clear message after usability testing showed that people skip store descriptions and don't trust security claims written as text. In 2025, with two other product designers, I ran usability testing (11 sessions, 7 core tasks), from interviews to synthesis and recommendations, and we turned the findings into changes to onboarding, contacts, calls and chats; together we made crypto payments an action of the chat itself, so people send stablecoins to a contact in five steps. Since 2026 I'm the sole product designer and turn wallet beta research (31 sessions) into redesigned onboarding, send and balance flows, while the product has grown to 770K+ downloads.

UI/UX Designer | Fruit Fight | Project contract January 2026 – September 2026

Mobile card game for iOS & Android · in parallel with Extra Safe

As the only designer, I owned the whole product design and took the app from the first screen to App Store release in 9 months. I designed an interface children understand without reading, built on colour, icons and one clear action per screen, and playtests confirmed that children played without explanations. I tested 3 orientation concepts before development and chose a mixed layout, which saved the team from rework later. I built Hebrew RTL layouts with a mirrored English version, so the developer worked from one set of layouts for both languages.

Product Designer (Design Lead on Project) | TIMEPLACEME, Inc | Project contract July 2025 – February 2026

AI-powered social gifting marketplace, mobile B2B & B2C · in parallel with Extra Safe

As Design Lead on the project, I coordinated and mentored a team of 5 designers. I set design priorities with the founder before splitting the work, so all five designers moved toward one product direction, and I made regular design reviews the quality gate for consistency and hand-off. I owned the AI assistant chat, its conversation flows, UX logic and interaction patterns, designed to guide people from choosing an experience to sending a gift. I aligned design with tech, marketing and leadership, and the app launched on the App Store and Google Play.

UI/UX Designer | VinAssessment | Contract May 2024 – November 2024

Automotive SaaS, B2B & B2C

Working directly with the CTO, I designed and launched 3 products: VinAssessment, VehiSales and VehiLeaks. Dealers asked for a faster way to check cars and my research across 10 competitors confirmed the gap, so I designed a Chrome extension that shows a car's history right on listing sites; dealers now check a car in three steps instead of copying a VIN into another tab, and the extension holds a 5.0 rating. I built one component library with responsive grids for 1440, 768 and 390 px and reused it across all three products, which let them ship faster and feel like one family.

UI/UX Designer | Freelance | Part-time July 2022 – June 2025

Digital agency, e-commerce, culture · alongside other roles

I designed a new e-commerce interface for Poof.ua on the Horoshop platform, keeping the brand identity within template constraints, and redesigned the Novakivsky Art Gallery website to present the work of painter Oleksa Novakivskyi. At Seventeam (NDA), I ran the full web design process, from site architecture and prototypes to design concepts and layouts for every device.

EDUCATION

Product Design — Projector Institute · May 2026 – September 2026

Product Design Basics — Beetroot Academy · March 2026 – April 2026

UX Design Beginning — Projector Institute · May 2024 – July 2024

UX/UI Designer — Beetroot Academy · June 2023 – December 2023

CERTIFICATES & ACHIEVEMENTS

Winner of the AI hackathon — Shift Education by Projector, February 2026

Google UX Design + 4 courses — Coursera, April 2024 – September 2024

Creative Practice Programs — CASES, March 2023 – Present

MENTORING

Mentor, UI/UX Design — Beetroot Academy, July 2025 – October 2025

Mentor, UI/UX Design — INSCIENCE, June 2025 – July 2025

Tutor, UI/UX Design — Beetroot Academy, September 2024 – March 2025
