About Me

Product designer with 4+ years in SaaS, fintech and mobile products. I join teams when a product is complex and still taking shape, and turn it into something people understand and trust: from research and user flows to design systems and developer hand-off. I have led a team of 5 designers, designed 2 SaaS products and a 5.0 Chrome extension, and worked on a messenger from pre-launch to 770K+ downloads. Mentor and founder of a community for women in design.

Experience

- **Product Designer** (Full-time)
Extra Safe – Cybersecurity & Secure Communication
November 2024 - Present

Designed and launched a marketing website that improved navigation and content clarity, contributing to a ~20–30% increase in conversion to key actions. Established a unified visual identity and design system, reducing production time for marketing assets by ~36%. Collaborated closely with marketing and development teams to ensure smooth implementation and consistent user experience.
- **UI/UX Designer** (Project work)
Fruit Fight – Mobile card game for iOS & Android
January 2026 - September 2026

Owned the entire product design as the only designer: took the app from the first screen to App Store release in 9 months, through several design iterations. Designed an interface children understand without reading: colour, icons and one clear action per screen instead of instructions. Tested 3 orientation concepts at the design stage and chose a mixed layout, avoiding rework in development.
- **Product Designer (Design Lead on Project)** (Project work)
TIMEPLACEME, Inc – Mobile B2B, B2C Platform, marketplace for surprise
July 2025 - February 2026

Spearheaded design strategy for a social gifting platform, coordinated and mentored a team of 5 designers. Collaborated with tech, marketing, and leadership to align design with business goals. Delivered creative direction, mentorship, and iterative testing to boost user engagement across European markets. Owned the design of an AI-powered assistant chat, defining conversation flows, UX logic, and interaction patterns to support users throughout the gifting journey.
- **UI/UX Designer** (Contract)
Vinassessment – Automotive SaaS (B2B & B2C)
May 2024 - November 2024

Designed and launched 3 major products **VinAssessment**, **VehiSales**, **VehiLeaks**. Created a **Chrome Extension** enabling dealers to check vehicle data instantly. Developed prototypes, ran user testing, and ensured smooth collaboration with developers.
- **UI/UX designer** (Part-Time)
Freelance – Digital Agency, E-commerce, Culture
July 2022 -June 2025

Recent Projects:
I designed a new e-commerce interface for Poof.ua within the Horoshop platform, delivering a smooth and functional user experience while maintaining brand identity despite template constraints.
I also redesigned the **Novakivsky Art Gallery** website to showcase the work of Ukrainian painter Oleksa Novakivskyi.
At **Seventeam** (NDA), I was responsible for the entire web design process, from developing site architecture and prototypes to creating design concepts and ensuring compatibility across all devices.

Volunteering

- **Mentor UI/UX Design** Beetroot Academy July 2025 - October 2025
- **Mentor UI/UX Design** INSCIENCE June 2025 - July 2025
- **Tutor in UI/UX design** Beetroot Academy September 2024 - March 2025
